

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

10	42	36	E.	Ditto, little wind
13	48	35	W.	Ditto
19	42	19	W.	At night snow; the least snow this season
22	27	26	W.	Sunshiny day
29	51	31	W.	Ditto
30	42	30	E.	Rain and overcast the whole day

N. B. The letter ^b placed over any figure, signifies that the Mercury was so many degrees below 0. Thus on the 31st of December 1765, you find ^b15, ^b29, that is, 15 and 29 below zero; or 47 and 61 below the freezing point. Again, on the 5th of January 1766, the numbers are 25 and ^b25, which is 25 above, and 25 below 0. So that the difference between the highest and lowest degrees of heat on that day, is 50 degrees.

On the 27th of May (1765), when the Mercury rose to 85, and fell no lower than 58 (the mean of which is $71\frac{1}{2}$) at Quebec, at a place down the river, called Mont Louis, was a heavy storm of snow, which continued the whole day: the distance of these places is about 260 miles.

Alexander Rose,
Lieutenant in the 51st Regiment.
